

SIMATS ENGINEERING

ASSESSMENT TOOL 1

Experiments

COURSE NAME: OBJECT ORIENTED ANALYSIS AND DESIGN
COURSE CODE: CSA11

COURSE OUTCOME COVERED

CO3: Analyze system requirements using object-oriented techniques to identify classes, attributes, and relationships and develop use case models. *(BL4)*

Assessment Tool Weightage: 40%

Code of Conduct:

*I **Nithishkumaran M 192320037** (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.*

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:

Nithishkumaran M

1. Book Bank Management System

Design and model a Book Bank Management System using UML to automate student verification, book allocation, and issue management. The system shall allow the Book Bank Administrator to capture and submit student credentials to the Central Verification System for validating student eligibility. Based on successful verification, the system shall generate an approval status and communicate it to the Book Bank Office. The office shall retrieve the approved student's requirements, verify book availability, and issue the requested books. The system shall maintain student, book inventory, issue, and return information with appropriate relationships among the entities. Analyze the functional requirements and develop suitable UML models representing the structural and behavioral aspects of the system.

RUBRICS FOR CALCULATION:**Experiments**

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Concepts	25	Demonstrates thorough understanding and effectively integrates multiple concepts/technologies	Good understanding with proper integration of most concepts	Basic understanding; limited or partial integration	Poor understanding; unable to integrate concepts
Experimental Design	30	Well-planned, systematic implementation with optimal solution	Correct implementation with minor issues	Basic implementation with errors or inefficiencies	Incorrect or incomplete implementation
Use of Tools	20	Effective and advanced use of tools/technologies with proper configuration	Appropriate use of tools with correct execution	Limited or inconsistent use of tools	Incorrect or minimal use of tools
Analysis of Results	15	Insightful analysis with accurate interpretation and validation of results	Good analysis with reasonable interpretation	Basic analysis with limited insights	Poor or incorrect analysis of results
Documentation	10	Clear, well-structured documentation with diagrams, code, and results	Organized documentation with necessary details	Basic documentation with missing details	Poor or incomplete documentation
